

---

To provide the Regional Councils and Support organizations with consistent data the GO Virginia Board and DHCD provided two sets of data that assisted in the development of the Economic Growth and Diversification Plan for each region.

The baseline measures were provided to each region to form the basis for the Economic Growth and Diversification plan and will be used by the GO Virginia Board as well as staff to track progress, examine trends over time, and determine the program's effectiveness in stimulating growth and diversification of the regional economy. The Regional Data can be found here. [Regional Data](#)

The economic analysis data provided information related to business clusters and other indicators of economic opportunity that will assist regions in their assessment of opportunities for economic diversification. Please contact [Elizabeth Rafferty](#) for this data.
